python lecture at KIS 2020

Installation guide

For the purposes of this lecture, we will be using Anaconda for managing our python distribution and additional packages, jupyter notebooks as our IDE and of coursepython as our programming language.

1. Installing Anaconda

Should you already have Anaconda installed, skip to step 1.4.

1.1. Installation under Windows

- Download the Anaconda installer (Python 3.7 version)
- · Anaconda is about 3 GB, make sure there's enough disk space available
- · Double click the installer to launch
- Click Next
- Read the licensing terms and click "I Agree"
- · Select an install for "Just Me" and click Next
- Select a destination folder to install Anaconda and click Next, you can use the default (for example C:\Users\<user>\anaconda3)
- Check only "Register Anaconda3 as my default Python 3.7"
- · Click the Install button
- Click Next
- Anaconda will ask you to install PyCharm, which is another IDE that we will not use. Click Next to skip
- If the installation was successful, click Finish
- Verify your installation by doing the following:
 - Click Start, search or select "Anaconda Prompt" from the menu (alternatively: search or select
 "Anaconda Navigator" and launch "Anaconda Prompt" from there)
 - This will open a Terminal in a new window. Enter conda list
 - Enter python, wait until it is loaded and enter quit()
- If any of the above commands lead to errors, refer to step 1.5.

1.2. Installation under Linux

You may need to install additional dependencies for Qt This should not be necessary for jupyter notebooks, but may be needed for other IDEs and packages. Ignore this if you are unsure.

- Download the Anaconda installer for Linux (Python 3.7 version)
- In a terminal enter bash ~/Downloads/Anaconda3-2020.02-Linux-x86_64.sh
- Hit Enter to view license terms, scroll to the bottom and enter "Yes"
- The default path of installation is /home/<user>/anaconda3. It is recommended to use this as your install location (but you may enter a different path at this point). Hit Enter.
- It is recommended to initialize Anaconda3 by typing "yes"
- Close the current terminal window and open a new one

- Run the command conda config --set auto_activate_base False
- Verify your installation by doing the following:
 - Enter conda list
 - Enter python, wait until it is loaded and enter quit()
- If any of the above commands lead to errors, refer to step 1.5.

1.3. Installation under macOS

- Download the graphical Anaconda installerfor macOS (Python 3.7 version)
- Double-click the downloaded file and click continue to start the installation
- Answer the prompts on the Introduction, Read Me, and License screens
- Click the Install button to install Anaconda in your ~/opt directory (which is recommended, you can click the "Change Install Location" button to install in another location)
- On the Destination Select screen, select Install for me only
- Click Continue
- Anaconda will ask you to install PyCharm, which is another IDE that we will not use. Click Continue to skip
- If the installation was successful, click Close
- · Verify your installation by doing the following:
 - Hit Cmd+Space, type either "Anaconda Prompt" or "Anaconda Navigator" and start the program (if you started "Anaconda Navigator", you can launch "Anaconda Prompt" from there)
 - This will open a Terminal in a new window. Enter conda list
 - Enter python, wait until it is loaded and enter quit()
- If any of the above commands lead to errors, refer to step 1.5.

1.4. Updating an existing version of Anaconda

Windows: Open the Start Menu and launch Anaconda Prompt (either by typing it in the search bar, or via Anaconda Navigator)

Linux and macOS: Open a terminal window - type the following two commands:

conda update conda

1.5. Troubleshoot

- Refer to https://docs.continuum.io/anaconda/user-guide/troubleshooting/
- If that does not help: Contact me (waidele@leibniz-kis.de), or Carl (schaffer@leibniz-kis.de) or Saida (smdiazcas@leibniz-kis.de)

2. Downloading the lecture repository

All of the material for the lecture will be located in myGitLab-repository. Although it can be easily viewed and accessed there, it is more convenient to download the whole repository on your local device. Note that content in this repository will change over time.

2.1. Downloading via Browser

- Download my GitLab repo
- · Click "Save File"
- Move the downloaded file (should be in your Downloads/ directory) into any folder you would like to store the lecture material
- Extract all files (double click the .zip file)
- After extraction, rename the folder that was created to python_lecture_KIS2020

2.2. Downloading via git

If you have git installed, you can clone the repository. This is only available for Linux and macOS users. - Make a new directory for the lecture material (for example ~/lectures) - In a terminal window, type

```
git clone https://gitlab.leibniz-kis.de/waidele/python_lecture_kis2020.git
```

To quickly update your local material, navigate your current directory to
 .../python_lecture_kis2020 and type

```
git pull --all
```

3. Setup the lecture environment

In order to make sure we are all using the same packages and versions, a virtual environment, specifically for this lecture can be installed.

Windows: Open the Start Menu and launch Anaconda Prompt (either by typing it in the search bar, or via Anaconda Navigator)

Linux and macOS: Open a terminal window

Navigate your directory to the lecture material via (windows):

```
cd <your_dir>\python_lecture_KIS2020
```

(Linux and macOS):

```
cd <your_dir>/python_lecture_KIS2020
```

where <your_dir> is the folder in which you extracted the .zip file (or cloned the repo into via git)

Type the following command

```
conda env create -f pyKIS.yml
```

• The installation will take about 3 minutes

Type

```
conda activate pyKIS
ipython kernel install --user --name=pyKIS
jupyter notebook
```

- Click "Quit" in the upper right in the browser tab that just opened and close the tab
- Type conda deactivate

You should be all set up and ready for the lecture now. If you have any issues, please feel free to contact me (waidele@leibniz-kis.de), Carl (schaffer@leibniz-kis.de) or Saida (smdiazcas@leibniz-kis.de)

4. Register your DataCamp account

Learning a new programming language is very much possible from just attaining a lecture. However, engaging with material in self studies makes individual progress much steeper. For this purpose, the Institute will give every participant of the lecture premium access to an online learning platform, DataCamp, for one month. How to start and what to do on this website will be presented in the lecture. Before that however, everyone has to sign up and upgrade their DataCamp-account individually (everyone will then be reimbursed individually). Therefore, please follow the steps below:

- Go to the DataCamp portal sign up
- Register with your leibniz-kis.de email (DataCamp will send some advertisement every now and then.
 You can of course choose any other email, but due to subscription purposes, your work-mail is advised)
- Important: The final details on how to get reimbursed have not been agreed on yet. Of course you will be fully imbursed eventually. We will notify everyone in a seperate email, once an agreement was made. If you'd rather wait until then, you can skip the following steps.
- Go to the plan overview
- Click "subscribe" under the BASIC tab
- At the top of the page, click "pay monthly"
- Enter your details. You can pay via credit card or PayPal, again: of course you will be fully reimbursed by the Institute.
- Download your invoice: Go to Account Settings -> Subscription, all the way at the bottom right, under "Payment History", you can click "Download". Save the pdf to your disk.
- Please keep this document, as you will need it for the reimbursement.
- Important: the Institute will for now only pay one month of subscription, so we need to cancel the plan right away. Again go to Account Settings -> Subscription
- In the top right under "Subscription", click "Stop Automatic Billing".
- A pop-up window will open. Click "Cancel forever"
- Click "Cancel Subscription" in the lower right, then click "Yes"
- You have to give feedback before the subscription is fully cancelled. Click one of the checkmarks and click "Send Feedback".
- If you have any trouble with your DataCamp account, please feel free to contact me (waidele@leibniz-kis.de) or Nazaret (nbello@leibniz-kis.de)
